

Amazon VPC (Virtual Private Cloud)- With Amazon Virtual Private Cloud (Amazon VPC), we can launch AWS resources in a logically isolated virtual network that we've defined. This virtual network closely resembles a traditional network that you'd operate in your own data center, with the benefits of using the scalable infrastructure of AWS.

It gives us full control over our virtual networking environment, including resource placement, connectivity, and security. Get started by setting up our VPC in the AWS service console.

For now, we are going to connect instances using Internet Gateway.

■ Creating VPC

- Search VPC → Click on it → VPC page will open. → Click on create VPC

Amazon Elastic Compute Cloud (EC2)

Create, manage, and monitor virtual servers in the cloud.

Amazon Elastic Compute Cloud (Amazon EC2) offers the broadest and deepest compute platform, with over 600 instance types and a choice of the latest processors, storage, networking, operating systems, and purchase models to help you best match the needs of your workload.

Launch a virtual server

To get started, launch an Amazon EC2 instance, which is a virtual server in the cloud.

Launch instance

View dashboard

Benefits and features

EC2 offers ultimate scalability and control

Fully resizable compute capacity to support virtually any workload. This service is best if you want:

- Highest level of control of the entire technology stack, allowing full integration with all AWS services
- Widest variety of server size options
- Widest availability of operating systems to choose from including Linux, Windows, and macOS
- Global scalability

Get started

Take our walkthroughs to help you launch an instance, learn about EC2 best practices, and set up your account.

Instance is not in public subnet
Associated subnet `subnet-0169545c8e1fb482b` (`subnet-1`) is not a public subnet.
To use EC2 Instance Connect, your instance must be in a public subnet. [To make the subnet a public subnet, add a route in the subnet route table to an internet gateway.](#)

Instance ID
i-0a9ed2b6bc588e0c7 (vpc-server)

☒ Connect using a Public IP
Connect using a public IPv4 or IPv6 address

☐ Connect using a Private IP
Connect using a private IP address and a VPC endpoint

☒ Public IPv4 address
13.112.20.26

☐ IPv6 address

Username
Enter the username defined in the AMI used to launch the instance. If you didn't define a custom username, use the default username, `ec2-user`.

ec2-user

Note: In most cases, the default username, `ec2-user`, is correct. However, read your AMI usage instructions to check if the AMI owner has changed the default AMI username.

Cancel Connect
